DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because page 12 of Applicant's specification recites "protruding electrode 2B." The figures show a protruding electrode terminal 2B, not a protruding electrode. Correction is required. See MPEP § 608.01(b).

Claim Objections

2. Claim 10 is objected to because of the following informalities: The recitation of "this" throughout the claim should read "said." Appropriate correction is required.
3. The recitation of "this insulating material" in line 24 should read "said insulating material". Appropriate correction is required.

Drawings

4. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the

applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 1-20 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

7. Claims 1 and 10 recite the limitation "the battery safety valve opening region." There is insufficient antecedent basis for this limitation in the claims.

8. With respect to independent claims 1 and 10 it is unclear whether the claims are product claims or method claims. In independent claims 1 and 10, it is unclear how the battery pack would contain a battery temporarily held in a mold. Furthermore, the specification and drawings also do not show a battery pack containing a battery held in a mold.

Claims 1 and 10 are extremely unclear. It is recommended that applicant rewrite these claims as product by process claims or method claims.

In claims 6 and 13, it is unclear how an electrode protrudes from the surface of the battery. It appears applicant meant to claim "electrode terminal" in light of the figures.

Claims depending from claims rejected under 35 USC 112 Second Paragraph are also rejected for the same.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicants disclosure. Rapparini et al. (U.S. Patent No. 5,354,133) teach a relief valve including a valve body where a covering disk holding a membrane is completely built in. Dey et al. (US Pat No. 4,115,629) teach a hermetic vent utilizing a metal-to-glass-to-metal seal between a metallic disc and a metallic container..
